The EU's Chemical Regulation: Protecting Human Health and the EnvironmentNanomaterials in the European Union: A Regulatory FrameworkThe use of nanomaterials is widespread in various industries, with many exhibiting novel characteristics such as enhanced strength, reactivity, or conductivity compared to their non-nano counterparts.Initially, the REACH Regulation did not specifically address nanomaterials. However, in 2018, the Commission introduced amendments to the technical Annexes of REACH, clarifying nano-specific provisions and introducing new requirements.Additionally, in 2020, the Commission updated Annex II with new Safety Data Sheet provisions, aligning with revised registration requirements for nanomaterials.The Commission's Recommendation on the definition of a nanomaterial was adopted in 2011, providing guidance for EU directives and regulations. The recommendation has undergone revisions in 2022, retaining its core principles, with supplementary information provided by industry associations such as IMA and BFR.
