###Apache Storm 2.8.3 Released!Apache Storm, a powerful and scalable real-time processing system, has officially been released as version 2.8.3! This latest update brings several exciting improvements to the table.###What's New in this Release?The Apache Storm team has worked tirelessly to enhance the stability, performance, and reliability of the platform. Some key highlights include: **Improved Curator Version**: The curator version has been upgraded from 5.8.0 to 5.9.0. **Deleted Storm SQL Modules**: The storm-sql-* modules have been deleted to improve overall stability and performance. **Updated Java Dependencies**: The latest Java dependencies have been updated to ensure compatibility and security. **Enhanced Commons Codec**: The version of commons-codec has been increased from 1.18.0 to 1.19.0 for improved functionality. These updates are part of the ongoing effort to maintain Apache Storm as a cutting-edge real-time processing solution. With this release, users can expect enhanced stability, performance, and reliability in their applications. ###Get Started with Apache Storm 2.8.3 Today!To take advantage of these improvements, you can download the latest version of Apache Storm from the official GitHub releases page. The release notes provide a detailed overview of the changes made in this update, so be sure to check them out for more information on what's new and improved. ###ConclusionThe release of Apache Storm 2.8.3 marks another significant milestone in the evolution of this powerful real-time processing platform. With its focus on stability, performance, and reliability, this latest update is set to further establish Apache Storm as a leader in the field of distributed computing.
